

Device Adhesive & Tapes

Barrier Wipes & Cream

Barrier wipes are clear, non-latex, hypo-allergenic adhesive barriers that can be used as a tacky base before applying adhesives. These act as an effective barrier between tape and skin and are easily removable. Some apply the wipes before the sensor or after on top of the sensor tape. Preference is up to you. Barrier cream protects skin and helps tapes and dressing adhere better.

Skin Tac Wipes/ Swab <i>(May have stronger hold than IVPrep)</i> 	Skin Prep Wipes / IV Prep Wipes 	AllKare Protective Barrier Wipe 	Cavilon 3M Durable Barrier Cream Unscented

Tapes & Patches

Here are some tapes and patches that can be applied over or around a sensor. Products are waterproof, breathable, flexible, latex-free, easy to apply, and most can be purchased online or sold at chain stores like Walmart/Target/ CVS. You may also order overtape directly from Dexcom:
